

Resume Analysis Report

Resume: Mahesh_Burra_Resume.pdf

Match Score: 45.52%

ATS Score: 90.00%

Missing Skills

No missing skills identified.

LLM Feedback

Strengths

- Strong Python programming experience with data science libraries (Pandas, NumPy, Scikit-learn)
- Hands-on machine learning workflow development and model evaluation
- SQL knowledge demonstrated through ETL pipeline and SQLite usage
- Data preprocessing, feature engineering, and data cleaning skills
- Experience with data visualization and reporting (Power BI, Streamlit dashboards)
- Version control familiarity with GitHub
- Solid foundation in core CS concepts (OOP, data structures, DBMS)
- Recent internship focused on real-world data science projects

Weaknesses

- Limited exposure to production-grade ML deployment (no Docker, CI/CD, or cloud services mentioned)
- Git usage described only as "Basics"; no evidence of branching, pull requests, or collaboration
- No mention of advanced SQL features (window functions, indexing, performance tuning)
- Absence of deep learning or advanced ML frameworks (TensorFlow, PyTorch)
- No experience with big data or distributed processing tools (Spark, Hadoop)
- Projects primarily use Streamlit Community Cloud; no enterprise deployment or scalability details

Missing Skills

- Containerization (Docker, Kubernetes)
- Cloud platforms (AWS, GCP, Azure) and related ML services
- CI/CD pipelines for ML model deployment
- Advanced SQL and database performance tuning
- Distributed data processing (Spark, Flink)
- Deep learning frameworks (TensorFlow, PyTorch)
- Model monitoring and MLOps practices

Suggestions

- Add a section highlighting Git workflow details (branching, pull requests, code reviews)
- Include any certifications or coursework in cloud computing, MLOps, or advanced ML
- Showcase deployment of models to cloud services or containerized environments
- Expand SQL experience by working on complex queries, stored procedures, or database optimization projects
- Add a project or coursework involving deep learning or large-scale data processing
- Mention any participation in hackathons, Kaggle competitions, or open-source contributions
- Update LinkedIn/GitHub with detailed README files, documentation, and links to live demos or notebooks
